

Onake Imomoh

SOC ANALYST

Lagos, Nigeria | onakeimomoh@gmail.com
[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Cybersecurity analyst skilled in monitoring security activity, investigating incidents and engineering detections. Analyses endpoint and network telemetry, validates suspicious behaviour and turns technical evidence into clear findings and response actions. Uses Python and defensive security tools to create repeatable, evidence-led workflows.

CORE SKILLS

Security operations: Alert triage, incident investigation, evidence preservation, network and endpoint analysis, technical reporting

Tools: Python, Wazuh, Splunk, Wireshark, Zeek, Suricata, Sigma, YARA, Volatility 3, Linux and Git

PROFESSIONAL EXPERIENCE

SOC Analyst Intern

Ubuntu Bridge Initiative | Remote | Jun 2026 - Sep 2026

- Investigated Sysmon, PowerShell, email and network evidence, correlating events to reconstruct incident timelines and produce defensible findings.
- Built and tested behavioural detections for 12 MITRE ATT&CK procedures, including attack variants, benign lookalikes and telemetry failures.
- Produced incident reports, executive briefs, evidence indexes and recovery recommendations with reproducible commands and integrity records to support technical review and response decisions.

Technical Coordinator and Cybersecurity Content Creator (Volunteer)

NexaScale | Jul 2026 - Present

- Research and write weekly cybersecurity content that translates technical concepts and current developments into practical guidance for community members.

Administrative Assistant

Future Tech Foundation | Remote | Jul 2024 - Sep 2025

- Managed schedules, communications and project records for multiple clients, maintaining organised documentation and reliable follow-up across time-sensitive workflows.

PROJECTS

Incident Response and DFIR | Incident reconstruction | [GitHub](#)

Reconstructed an intrusion from multi-source evidence, recovered and verified a 5,137-record dataset, and delivered tested detection content, an incident report and an executive brief to support response and recovery decisions.

Detection Engineering | Detection as code | [GitHub](#)

Built behavioural detections for 12 ATT&CK procedures and validated them against attack variants, benign lookalikes and telemetry failures to strengthen coverage and reduce false conclusions during triage.

EDUCATION AND PROFESSIONAL DEVELOPMENT

BA Foreign Languages | University of Benin | 2021

Google Cybersecurity Professional Certificate | Coursera | Feb 2026

Women Techsters Fellowship | Cybersecurity Track, Tech4Dev | Sep 2025 - Aug 2026

Languages: English; French (professional reading and writing)
